EVOLVEO Alarmex wireless GSM alarm

EVOLVEO Alarmex - complete intelligent security for your property, with tamper protection

The EVOLVEO Alarmex compact wireless alarm is an ideal choice for flat, office, garage, workshop, house, cottage or shop security. The wireless technology eliminates the need of drilling and wiring operations. Everything you need to do is proper placing of the wireless sensors in the building or up to 80 meters out of it. In case of alarm situation, this event is signaled via SMS warning message on up to 5 preset phone numbers and via warning voice call as well. Operating the alarm is easy, all you need is to activate/deactivate it using the remote control, key control, similarly to central car locking system.

Tamper function

The EVOLVEO Alarmex is also equipped with an advanced tamper function that triggers an alarm when someone tries to damage the main unit, the motion sensor or the opening sensor. The system can also notify you via SMS of the declined quality of GSM signal or triggers a siren in case of total GSM signal drop-out. You will appreciate it if there will be a GSM signal jammer used upon the secured building violation. A useful feature is also the opportunity to send an SMS when encoding or decoding the alarm, e.g. you will receive an SMS when your child comes home.

EVOLVEO Alarmex application free available on Google Play

With the EVOLVEO Alarmex app, you can easily control the whole system by easy entering commands on your Android smart phone touch screen. This application is only a comfortable extra, the main control unit is the remote control which is included in the alarm package.

Specifications

- tamper protection of the main unit, motion sensor and magnetic sensor
- possibility to send an SMS message about the poor quality of GSM signal
- possibility to trigger a siren in case of total GSM signal drop-out
- sensitive GSM module with integrated antenna in the alarm body
- ability to send an SMS message about alarm activation and deactivation
- pair of integrated switching relays
- you can connect an outdoor wireless siren
- communication via the integrated intercom
- the alarm can operate without a SIM card, it will only trigger the siren
- perfect for secure office, house, cottage, store, garage, etc.
- easy installation, no drilling - totally DIY
- possibility to set up to 5 numbers for alarm
- possibility to set up three protective zones, each zone can include up to 32 sensors
- alarm is triggered upon monitored zone breach, main unit triggers siren and starts calling 5 preset phone numbers saved on the main unit SMS card and sending sms to these numbers.
- alarm remote on/off, can be turned on later using your cellphone
- you can use any GSM operator SIM card
- automatically send SMS message and make call upon alarm trigger
- SMS message alert in case of power outage, built-in battery ensures operation for approx. 10 hours in such case
- possibility to connect wire sensors
- SOS button on key control, siren activation and emergency calls/SMS for help
- possibility to add other sensors such as PIR motion sensors, door sensors, smoke, gas, level detectors or outdoor siren, etc.
- easy setup and configuration via SMS commands, password protected
- the main alarm unit and sensors are designed for indoor use, the 433 MHz frequency is utilised
- you can comfortably control the system with the „EVOLVEO Sonix“ application from your Android phone

Giftbox content

- 1 x - GSM alarm system: main unit with a built-in antenna
- 1 x - wireless PIR motion sensor with a tamper protection and a built-in antenna, monitors movement in the room
- 1 x - wireless opening sensor with a tamper protection and a built-in antenna
- 4 x - high quality remote control (key case) for GSM alarm on/off switching
- 1 x - internal 110 dB mini siren
- 1 x - 230V central unit power supply
- 1 x - detailed user manual for easy setting and operating
